

SURVEY RESULTS ON THE QUALITY OF STUDIES 2014

Feedback report

General information

It was indicated that the percentage of responses received was too low to make generalizations on the quality of subjects surveyed. For example, the subject 'Absrakcija ir realybē' generated feedback from 1 student out of 25.

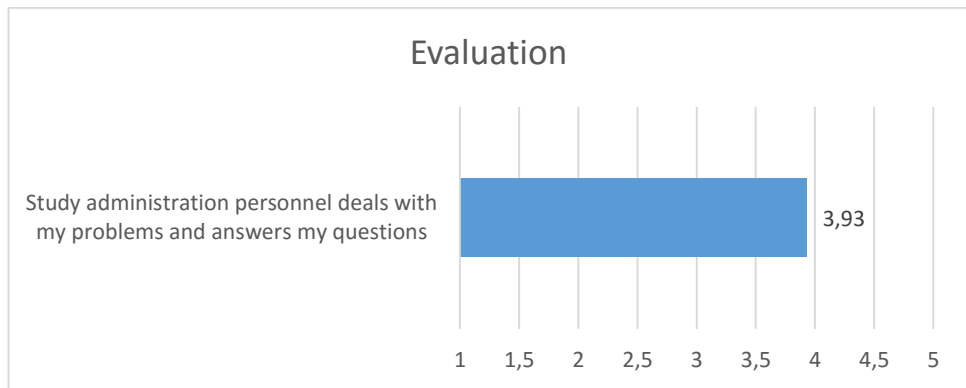

The response rate was calculated for all the subjects separately, however it was not representative for generalization, analysis and discussion.

Regardless of low response rate programme directors were introduced to the results. Open comments and suggestions supported the information received during mid-term formative evaluations.

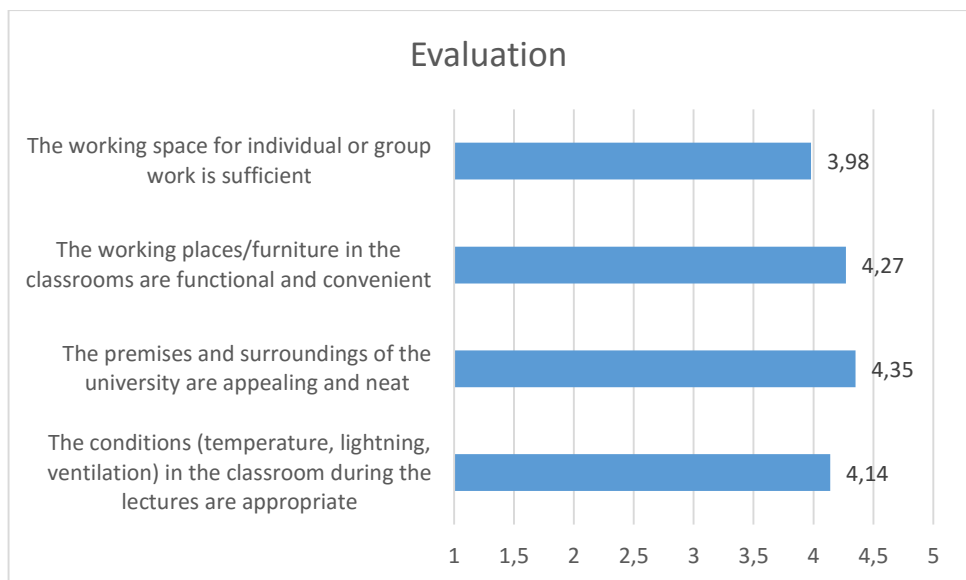

The response rate to general questions (infrastructure, study administration, IT) ranged from 9% to 10,52%. Main findings and feedback on improvement plans are divided in three sections and provided below:

- Study administration
- Infrastructure
- IT systems

Study administration

Infrastructure

IT systems
